SUBJ: Peak Season Info Request

SDDC is conducting an after action working group to assess the movement of personal property during the 2010 peak season. We are looking for specific thoughts on what process, business rule or system change the TSP community needs to prevent what transpired this year. For example, we've heard from several TSPs that having blackout capability at the PPPO level would help them manage their capacity better. There are going to be limitations in what we can accomplish prior to next season and we need to prioritize any changes that require a longer lead time.

Our plan is to conduct the after action working group using this feedback from TSPs and Services to determine what changes can be made. We're planning a telecon with a small representation from each group to take place the week of 16 Aug to discuss the issues and assist SDDC in determining the way ahead.

Please send your comments to sddc.safb.ppperf@army.mil email box by 4 Aug 2010 or you may send comments to your respective Industry association representatives for consolidation.
